

# Persivia CareTrak™

Improve provider efficiency and patient care at the point of service with the Persivia CareTrak EHR Companion.

CareTrak is a downloadable application installed on the physician's desktop that integrates with the EHR to give control back to the physician and enhance their ability to deliver the highest quality and most efficient care.

## At your fingertips while treating the patient

Receive AI-driven clinical insights, gaps in care

Monitor and close HEDIS gaps

Improve HCC coding

Review goals and care plans

Perform Annual Wellness Visits and other assessments

Perform telemedicine visits

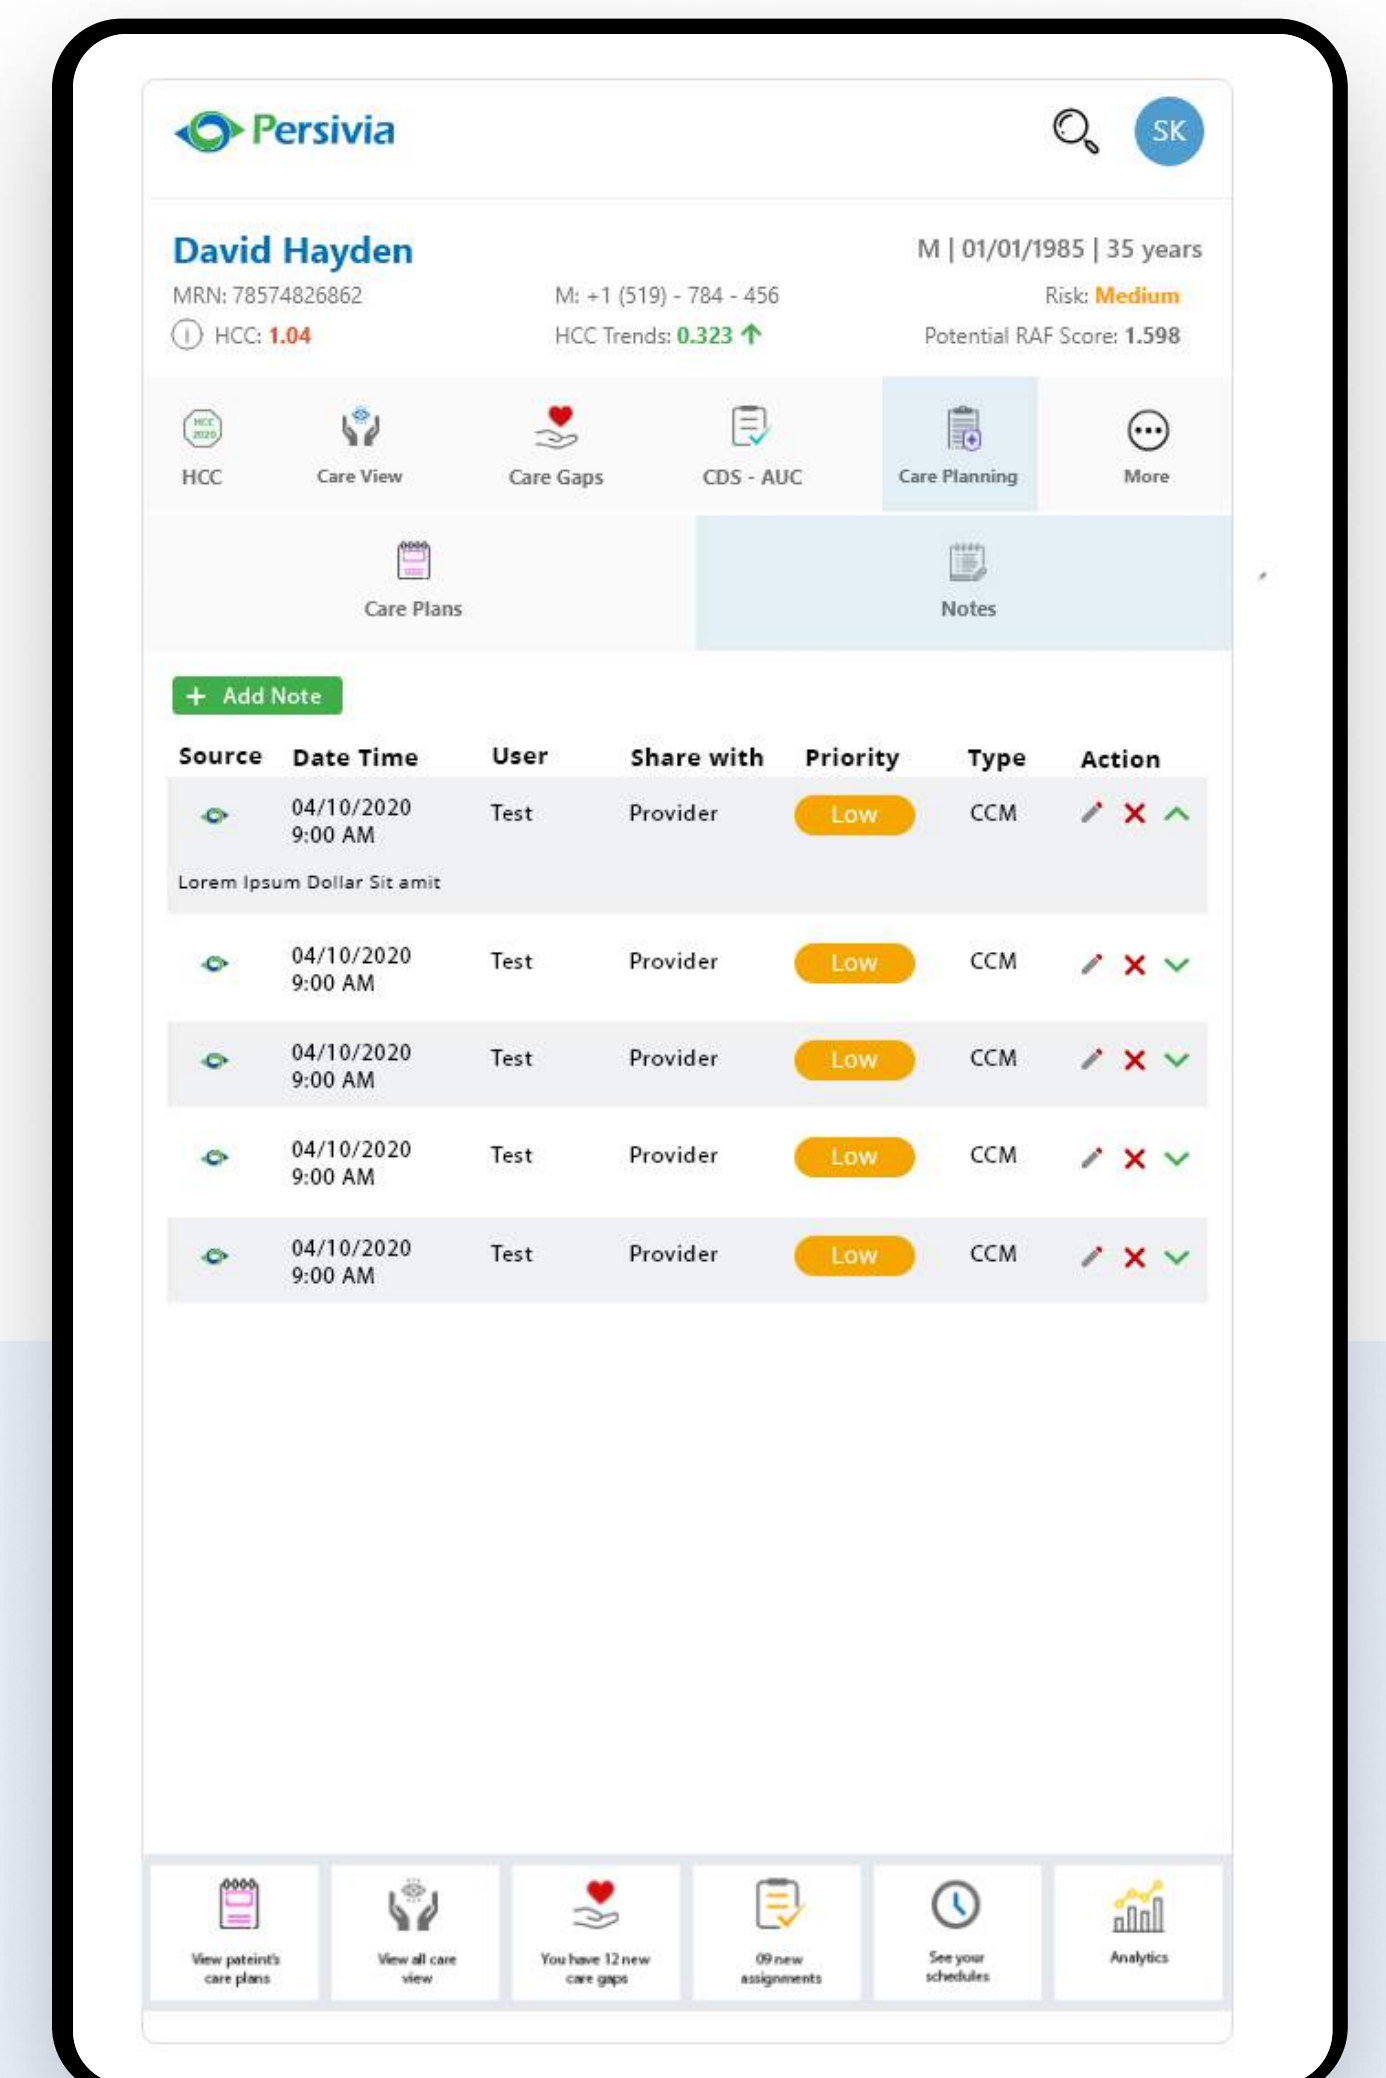

Consult Radiology Appropriate Use Criterion (AUC)\*

\*After 2021 CMS will no longer reimburse for imaging procedures if a CMS qualified CDSM (like Persivia) is not consulted at the time of the order being placed.

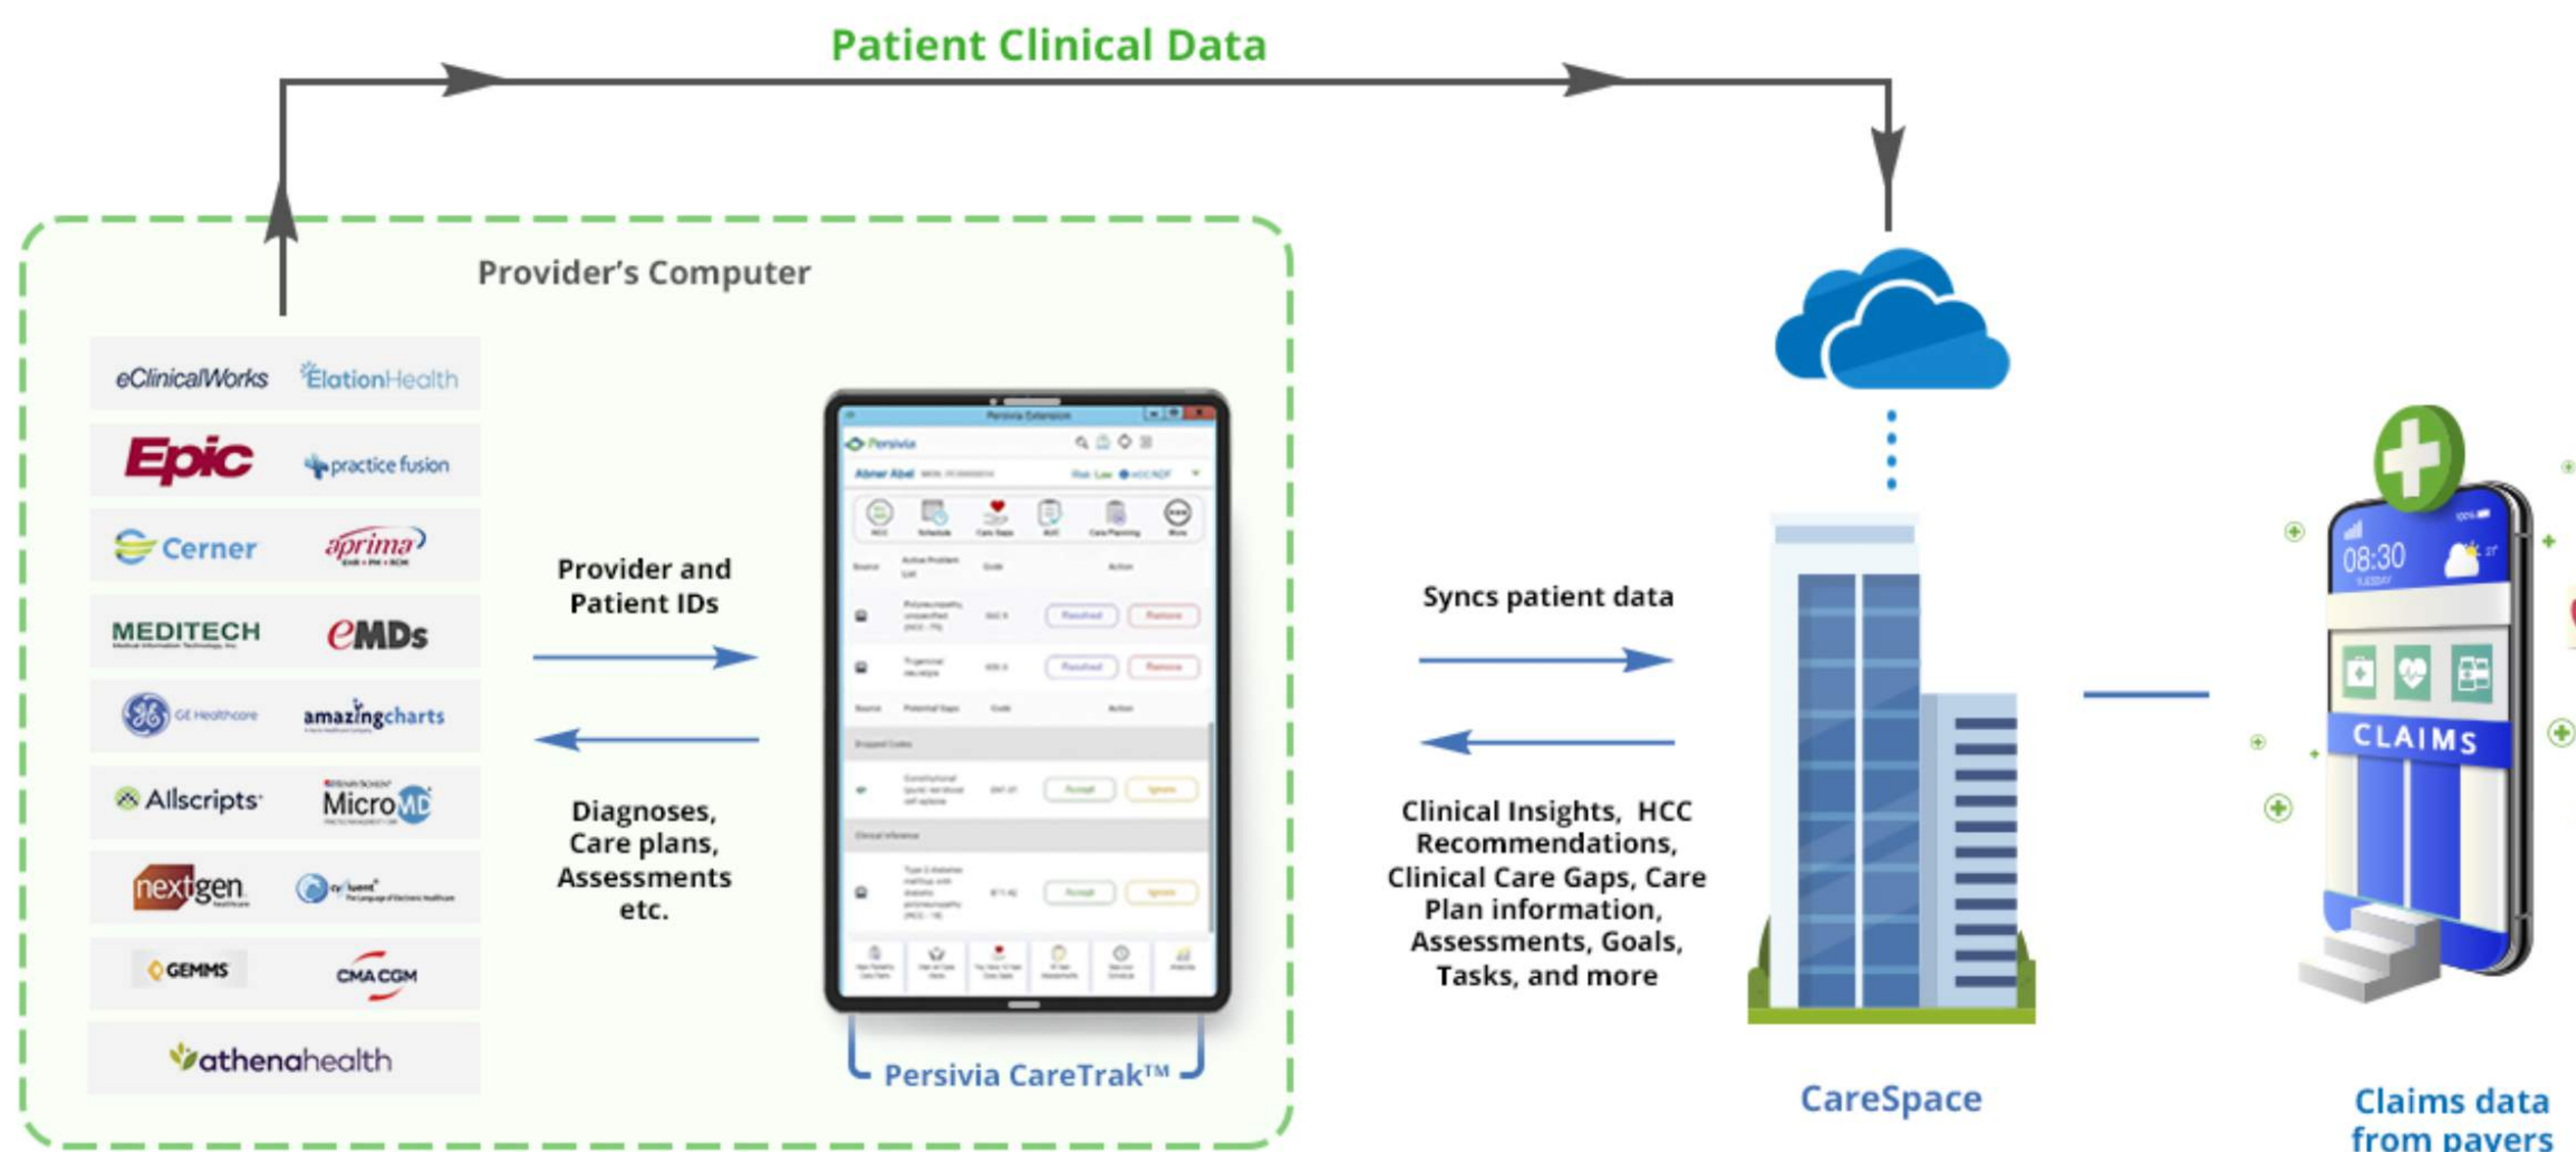

## The Flexibility to Have It Your Way

Persivia CareTrak is configured to show only the capabilities that you choose and works with both browser-based and locally deployed EHRs.

## How the Persivia CareTrak EHR Integrated Extension works:

The Persivia CareTrak EHR Extension is a companion to the CareSpace® platform that runs on the physician's computer and automatically syncs with their EHR to seamlessly show all supporting details for the patient being viewed within the EHR.

Physicians do not need to log into any other applications as all clinical insights, care plans, gaps in care, and HCC coding insights are displayed along side their existing EHR
