\$17 million

Achieved on Cost Savings

14%

Reduction in All-Cause 30-day
readmission rate

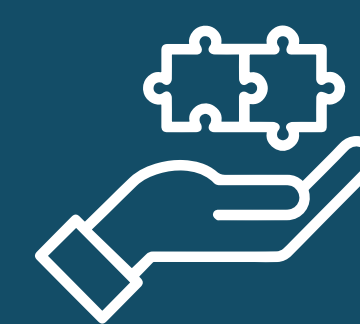

How We Achieve It

CareSpace® enhances provider’s visibility into patient journeys, improving care, transitions, and outcomes. Integrated into discharge planning, it offers insights into post-acute provider performance and length of stay analytics, bridging care gaps and aiding in managing post-acute care spending.

A Unified Longitudinal Patient Record

That dynamically updates from various sources, including EMRs, HIEs, labs, claims data, SDOH, HL7 data, patient-reported data, and diagnostic device data.

Seamless Care Coordination

All parties involved in patient care collaborate within the CareSpace® platform, accessing necessary workflows, configurable clinical care gaps, intelligent assessments, automated care planning, all while having real-time access to the patient’s longitudinal medical record.

Predictive Analytics

CareSpace® provides predictive analytics for expected Length of Stay (LOS) at a skilled nursing facility, supporting clinical decision-making to enhance patient outcomes, reduce post-acute LOS, and optimize post-acute utilization.

Patient Engagement

Empowering patients to take an active role in their health through patient portal and mobile apps (available on IOS and Android).
