Persivia

Quality Measurement under the TEAM Model

Quality Measures

- All Cause Readmission
- CMS PSI-90
- LEJR Patient Reported Outcome
- Hospital Harm & Failure to Rescue

Improve Your Quality Performance in the TEAM Model with Persivia

- Turn quality data into actionable insights
- Implement targeted interventions to improve specific measures
- Maximize your financial performance under the TEAM model

Calculation Example:

Let's suppose:

Target Spend	= $25000
Total Spend	= $24500
NPRA (savings)	= $500
Quality Adjustment (10%)	= $50
CQS	= 80
Amount Earned	= 0.80 * $50 = $40
Final Reconciliation	= $500 + $40 = $540

Provider Earns $540

Key Take Aways:

- Provider achieved savings ($500)
- High quality score (80) increased earnings
- Quality adjustment added $40 to savings
- Final earnings higher than initial savings
- Demonstrates importance of both cost control and quality performance

Quality performance can significantly boost financial outcomes in TEAM Model
