

What is an Episode under the Transforming Episode Accountability Model (TEAM)

Timeline

The TEAM model defines an episode of care as spanning from the initial procedure or admission through 30 days after the patient is discharged from the hospital.

Components

Procedure/Admission: Starting point of the episode

Hospital stay: Period between admission and discharge

Discharge: Patient leaves the hospital

Post-Discharge: 30-day period after leaving the hospital

Duration

The full episode duration extends beyond the hospital stay, including the 30-day post-discharge period.

Goal

This model aims to improve care coordination and outcomes beyond just the hospital stay.

Navigate TEAM Successfully with Persivia

Let Persivia guide you through the complexities of the TEAM model:

- Leverage our proven strategies for episodic models
- Benefit from our cutting-edge analytics and reporting tools
- Optimize your performance and maximize reimbursements
- Ensure seamless integration with your existing systems
